

### Home Inspection Checklist

*This is not intended to be a complete or exhaustive list of maintenance or safety items of the type provided with a professional GPI inspection report. It is simply a starting point or possible comparison sheet you can use to help you remember and separate positives and negatives of several properties you may be reviewing. Completion should take under 30 minutes. During a general home inspection, we would review hundreds of components of the property, including mechanical, electrical and ventilation systems, the roof, attic and crawl spaces. We do not recommend that you use any ladders or tools during this inspection for safety reasons. For more information, or to book an inspection, go to [www.gpiweb.com](http://www.gpiweb.com).*
